

## ***Project Summary and Justification***

Department      Finance

Division          Pershing

Pershing is a valuable asset to the City. The activity housed in the Auditorium has an annual economic impact on the City in excess of \$31.0 million. These improvements will help us continue to (1) stimulate economic activity, (2) create additional entertainment and recreational opportunities for the citizens, (3) fulfill a wide variety of civic and community uses and (4) ensure a safe environment for our patrons, clients and performers. The attached Capital Improvements Program projects are necessary to maintain and improve the facility to the standards required of today's Public Event Facility Industry.

### **Project 1      Continued Refurbishing and Renovation of the Auditorium**

With the standard and the trends of the industry changing, it is imperative that we continue the refurbishing and renovation programs as set forth in the proposal. Much of the equipment we use on a daily basis is original equipment with the building 49-years ago and it is simply wearing out. Projects currently scheduled for the period covered by this plan include dressing room renovations and fire safety renovations. We are in an increasingly competitive environment and upgrades must be made to begin to compete with much newer facilities. We must have a facility that is responsive to the needs and requirements expected of a public assembly complex for a market the size of Lincoln.

### **Projects 2, 3    Install a Passenger Elevator, Install Electric Entry Doors**

The projects for the passenger elevator are required as a result of the Federal Americans with Disabilities Act of 1990.

### **Project 4      Re-tuck, Point, and Seal Building Exterior and Mosaic**

Continued maintenance of the facility includes re-tucking, pointing, and sealing the building exterior and mosaic.

### **Project 5      Replace Chiller with Newer Efficient 350-ton Chiller**

Refurbishing the exterior and replacing the chiller are necessary periodic costs that must be incurred to protect the value of the Auditorium. In the case of the chiller, Pershing currently operates with a single 21-year-old York centrifugal 500-ton unit. We are at the end of the life cycle for this class of equipment. A new unit is needed to back up/replace the York. New technology and unit efficiencies would lower utility and operating costs and payback much of the initial investment in the new chiller.

### **Project 6      Asbestos Removal**

In order to maintain the environmental safety of the facility, all asbestos must be removed from the building.

### **Project 7      Replace Area Floor Chairs**

Replacement of Pershing's portable chairs is rapidly becoming a priority. Our current chairs were purchased in 1983. Constant use over the past 20 years has taken a heavy toll on the chairs appearance, comfort and most of all structural safety.
