7.4.3 Project SSC-3: Grade Control on Main Stem SCR010 at W Pioneers Blvd Bridge

Problem description: An existing rock armored knickpoint in the channel main stem SCR010 at W Pioneers Blvd Bridge (County Structure O-175) over the main stem (Located east of W Pioneer Blvd and S 1st St) is failing. Past incision has exposed the bridge pier foundation and the stream banks downstream of the bridge are eroding.

Figure 7-10: Knickpoint and Exposed Bridge Piers

Recommendation: Recommend constructing a rock grade control and stilling basin with associated bank revetment to protect the bridge piers and channel by preventing the knickpoint from propagating upstream. A USGS stream gauge is installed on the bridge at this location. The designed revetment must not interfere with the operation of the gauge. City GIS contour data indicates the channel flowline at elevation immediately upstream of the knickpoint at the W Pioneers Blvd Bridge is 1,136 feet AMSL.

Impact to Special Areas and Water Quality: Project is located in Salt Valley Corridor and within Wilderness Park. Consideration during design and construction should be provided to minimize disturbance to these special areas and reduce impacts to water quality to the greatest extent practical.

Estimated Project Cost: \$482,000
